REDUCING HEALTHCARE INEQUALITIES

The **Core20PLUS5** approach is designed to support Integrated Care Systems to drive targeted action in health inequalities improvement

CORE20

The most deprived **20%** of the national population as identified by the Index of Multiple Deprivation

PLUS

ICS-chosen population groups experiencing poorer-than-average health access, experience and/or outcomes, who may not be captured within the Core20 alone and would benefit from a tailored healthcare approach e.g. inclusion health groups

Target population

CORE20 PLUS 5

Key clinical areas of health inequalities

1

MATERNITY
ensuring continuity of care for **75%** of women from BAME communities and from the most deprived groups

3

CHRONIC RESPIRATORY DISEASE

a clear focus on Chronic Obstructive Pulmonary Disease (COPD), driving up uptake of Covid, Flu and Pneumonia vaccines to reduce infective exacerbations and emergency hospital admissions due to those exacerbations

5

HYPERTENSION CASE-FINDING

to allow for interventions to optimise blood pressure and minimise the risk of myocardial infarction and stroke

2

SEVERE MENTAL ILLNESS (SMI)

ensuring annual health checks for **60%** of those living with SMI (bringing SMI in line with the success seen in Learning Disabilities)

4

EARLY CANCER DIAGNOSIS

75% of cases diagnosed at stage 1 or 2 by 2028
